

IF Else in C

The if..else statement is an extension of the simple if statement.the following syntax is if..else.

Syntax

```
if(true condition)
{
    true statement
}
else
{
    false statement
}
```

the above syntax if expression is true then true block is execute otherwise false block is execute in this if..else statement.

Example

```
#include<stdio.h>
#include<conio.h>

void main()
{
    int age;
    clrscr();

    printf("Enter Your Age:");
    scanf("%d",&age);

    if(age > 18)
    {
        printf("You are Eligible for Vot")
    }
    else
    {
        printf("You are Not Eligible for Vot");
    }
    getch();
}
```
