

Overview of String in C

A string is a sequence of characters that is treated as a single data item. Character strings are often used to build meaningful and readable programs. The common operations performed on character strings include:

Reading String

Writing String

Combining String Together

Copying one String to Another

Comparing String for Equality

Extracting a Portion of a String

In this tutorial, we discuss reading and writing operations in detail and with examples. Please click on the next button to change the topic and read about reading strings in C programming.
