

Simple IF in C

The simple is statement is powerful decision making statement and is used to control the flow of execution of statement.the syntax of simple is is.

Syntax

```
if(expression)
{
    statement-block;
}
```

Example

the example of simple if condition that check you have entered number is zero or not.

```
#include<stdio.h>
#include<conio.h>

void mian()
{
    int a;

    printf("Enter Any Number:");
    scanf("%d", &a);

    if(a==0)
    {
        printf("Yes!..You Have Enter Zero")
    }
}
```

the example is simple if condition that execute only if part in condition.user can enter any number ,if check this number is zero or not and display output on screen.
