

# Writing String in C

printf function used with %s print string to the screen.the format %s can be used to display an array of characters that is terminated by the null character.for example statement.

```
printf("%s",name);
```

the above statement are used to display the entire contents of the arra name.we can also specify the precision with wich the array is displayed.for example you can used %10.4 indicates that the first four character are to be printed in a field with of 10 columns.

## Example

```
#include<stdio.h>
#include<conio.h>

void main()
{
    char company_name[20] = "Veewom Technology";
    clrscr();

    printf("\n\n");
    printf("%s",company_name);

    getch();
}
```
