

# HTML - Paragraphs

Paragraphs are defined with the `<p>` tag. think of a paragraph as a block of text. it is used to keep some specific paragraph or related in one section of a document. `<p>` tag tag is paired tag and it sets the paragraph always with new line.

## Example

```
<html>
<head>
  <title>Paragraphs</title>
</head>
<body>
<p>This is sample paragraph used with <p> tag.</p>
<p>
  The Veewom is largest tutorials and educational website on the internet, for more details visit Veewom.com.
</p>
</body>
</html>
```

## Output

This is sample paragraph used with `<p>` tag.

The tutorialstudio is large tutorials and educational website visit [virtualhax.com](http://virtualhax.com)
