

HTML Tutorial

HTML stands for Hyper Text Markup Language. it is a language that allows us to create a kind of documents that can be viewed on any machine, in any operating system, in a similar way. the document created using this language is called webpage. the clickable text in these web pages, which can point to another document or a webpage, is called hyperlink or hypertext.

This is the language which allows you to create hyper text into the document that is why it is called Hyper Text Markup Language. Using this language you can apply different effects to your text, images, you can create tables, forms with different controls etc, in short, HTML is just a series of tag that are integrated into a document that can have text, images or multimedia content.
