

Array

a shell variable is capable enough to hold single or multiple values.shell supports a different type of variable called "array variable" to store multiple values at the same time with giving a single name to variable.

Declare an Array

```
declare -a [ ARRAY_NAME ]
```

Defining Array Value

```
Array_Name [ Index ] = Value
```

Example

```
declare -a myarray

myarray[0] = 'Virtualhax Inc.'
myarray[1] = 'Veewom Technology'
myarray[2] = 'Quizer Studio'

echo ${myarray[0]}

#Output
#Virtualhax Inc.
```
