

Read Command

the read command is used to get value to store in variable from the keyboard.

Syntax

```
read varname1
```

Example

```
read $a
```

the following example : write a shell script to enter first name and last name and display it.

```
echo "Enter Your First Name:"  
read $fname  
echo "Enter Your Last Name:"  
read $lname  
echo "Welcome - $fname $lname"
```
