

# Linux Desktop Environment

A desktop environment is a collection of software designed to give functionality and a certain look and feel to an operating system. Linux users have a choice of many different desktop environments, all with their own style and strengths.

You can install one of these desktop environments after installing your Linux distribution and switch between desktop environments from the login screen. You can also choose to install a Linux distribution that comes with the desktop environment. For example, you can get Ubuntu in many different flavors.

## Desktop Environment

Sr.No	Desktop Environment
01	X Windows Desktop Environment <a href="#">Learn</a>
02	KDE (K Desktop Environment) <a href="#">Learn</a>
03	GNOME(GNU Network Object Model Environment) <a href="#">Learn</a>
04	Unity Desktop Environment <a href="#">Learn</a>
