

PHP - Ajax

Ajax is not a programming language or a tool, but a concept. Ajax is a client-side script that communicates to and from a server and database without the need for a postback or a complete page refresh. Ajax itself is mostly a generic term for various JavaScript techniques used to connect to a web server dynamically without necessarily loading multiple pages.

Form Submit Without Page Refreshing Using php and ajax

Index.php

```
<html>
<head>
<title>Submit PHP Forms without Page Refresh Ajax | Tutorials Studio</title>
<script type="text/javascript" src="jquery-1.11.3-jquery.min.js"></script>
<script type="text/javascript">
$(document).ready(function()
{
$(document).on('submit', '#reg-form', function()
{
    var data = $(this).serialize();
    $.ajax({
    type : 'POST',
    url  : 'submit.php',
    data : data,
    success : function(data)
    {
        {
        $("#reg-form").fadeOut(500).hide(function()
        {
        $(".result").fadeIn(500).show(function()
        {
        $(".result").html(data);
        });
        });
        }
        });
        return false;
    });
});
});
</script>
</head>
<body>
<div id="container">
    <div id="form" class="result">
    <form method="post" id="reg-form">
    <table border="0">
    <tr>
    <td><input type="text" name="fname" id="lname" placeholder="First Name" /></td>
    </tr>
    <tr>
    <td><input type="text" name="lname" id="lname" placeholder="Last Name" /></td>
    </tr>
    <tr>
    <td><input type="text" name="email" id="email" placeholder="Your Email" /></td>
    </tr>
    <tr>
```

```

        <td><input type="text" name="phno" id="phno" placeholder="Contact No" /></td>
    </tr>
    <tr>
        <td><hr /></td>
    </tr>
    <tr>
        <td align="center"><button type="submit">Submit</button></td>
    </tr>
</table>
</form>
</div>
</div>
</body>
</html>

```

submit.php

```

<?php
if($_POST)
{
    $fname = $_POST['fname'];
    $lname = $_POST['lname'];
    $email = $_POST['email'];
    $phno = $_POST['phno'];

    <table border="0">
    <tr>
        <td>Succedd !!!</td>
    </tr>
    <tr>
        <td><hr /></td>
    </tr>
    <tr>
        <td>First Name</td>
        <td><?php echo $fname ?></td>
    </tr>
    <tr>
        <td>Last Name</td>
        <td><?php echo $lname ?></td>
    </tr>
    <tr>
        <td>Your Email</td>
        <td><?php echo $email; ?></td>
    </tr>
    <tr>
        <td>Contact No</td>
        <td><?php echo $phno; ?></td>
    </tr>
    </table>

?>

```

Live Demo

The following form is only demo purpose contact form it can't submit your data into database, enter fake data

like name demo email demo@example.com and than click on submit button

First Name
Last Name
Your Email
Contact No

Submit
