

PHP - Break Statement

The keyword break ends execution of the current for, foreach, while, do while or switch structure. When the keyword break executed inside a loop the control automatically passes to the first statement outside the loop.the following example of break statement.

Example

```
<?php
    $a=1;
    while($a<=10)
    {
        echo $a;
        $a++;

        if($a==5)
        {
            break;
        }
    }
?>
```
