

PHP Mail Functions

Function	Description
mail.add_x_header	Add X-PHP-Originating-Script that will include UID of the script followed by the filename. For PHP 5.3.0 and above
mail.log	The path to a log file that will log all mail() calls. Log include full path of script, line number, To address and headers. For PHP 5.3.0 and above
SMTP	Windows only: The DNS name or IP address of the SMTP server
smtp_port	Windows only: The SMTP port number. For PHP 4.3.0 and above
sendmail_from	Windows only: Specifies the "from" address to be used when sending mail from mail()
sendmail_path	Specifies where the sendmail program can be found. This directive works also under Windows. If set, SMTP, smtp_port and sendmail_from are ignored
