

# PHP - String

In php you can store string in variable and directly print in echo and print function with echo used single quotes, double quotes the following simple example.

## Example

```
<?php
    echo 'This is Simple String With Single quotes';
    echo "This is Simple String with echo and double quotes";
?>
```

In this topic we have includes some string function for better understanding string manipulation in php the following string function and example.

## Length of a String

```
<?php
echo strlen("tutorialstudio"); // outputs 15
?>
```

## Number of Words

```
<?php
echo str_word_count("Tutorials Studio"); // outputs 2
?>
```

## Reverse a String

```
<?php
echo strrev("Hello world"); // outputs dlrow olleH
?>
```
