

Python Functions

In python a function is a group of related statements that perform a specific task.functions help break our program into smaller and modular chunks,as our program grows larger,function make it more organized and manageable.it avoids repeton and make code reusable.

Syntax

```
def function name(parameters):  
    statements(s)
```

Example

```
def test(name):  
    print("Welcome" + name)
```

Functions Call

```
test('Bharat')  
    Welcome Bharat
```
