

Python If Else Statements

In python if..else statements is execute two time like if or else,if condition id true than execute if part when execute else part in the program.

The following syntax or example of if..else statements in python

```
if test expression
    body of if
else:
    body of else
```

Example

```
a = -5;

if a >= 0:
    print("This Number is Positive");
else:
    print("This Number is Negative");
```
