Python Nested If Statements

In python if..elif..else statements inside another if..elif..else statements.is called nesting if in python programming.The following syntax and example of nested if.

Syntax

```
if test expression
        if test expression:
                body of if
        else:
                body of else
else:
        body of if
```

Example

```
= 0:
        if a == 0:
                print("Zero");
        else:
                print("Positive");
else:
        print("Negative");
```
